

1. Ideation Phase

Import Data using Transform Maps (Spreadsheet) — ServiceNow Micro Project

Project Title

Import Data using Transform Maps (Spreadsheet)

Idea / Concept

The project idea is to automate the migration of employee information from an external Excel spreadsheet into ServiceNow. Instead of manually entering employee records one by one, the data is loaded in bulk through Import Sets and transformed into a custom Employee Test table.

Problem Identified

Employee data received in spreadsheet format can require manual entry into ServiceNow. Manual entry takes more time and may cause incorrect values, missing records, or duplicate records when the same data is imported repeatedly.

Proposed Idea

Use ServiceNow Import Sets as a staging area and Transform Maps to map spreadsheet fields to the Employee Test target table. Use Coalesce on Employee ID to identify existing records and avoid duplicate employee records.

Key Features

- Bulk import employee data from Excel.
- Custom Employee Test table.
- Automatic source-to-target field mapping.
- Transform Map for data migration.
- Coalesce for duplicate prevention and record updates.
- Transform History for validation.
- Reports for department and location analysis.
- Dashboard for centralized employee analytics.

Expected Outcome

A working ServiceNow solution that imports employee data, updates existing employees when appropriate, avoids unnecessary duplicates, and presents employee information through reports and a dashboard.
