

2. Requirement Analysis

Import Data using Transform Maps (Spreadsheet) — ServiceNow Micro Project

Functional Requirements

- The system shall accept employee data from an Excel spreadsheet.
- The system shall load spreadsheet data into an Import Set table.
- The system shall maintain a custom Employee Test target table.
- The system shall map source fields to target fields using a Transform Map.
- The system shall insert new employee records.
- The system shall update matching employee records when Coalesce is enabled.
- The system shall provide Transform History for import verification.
- The system shall generate employee reports.
- The system shall display the reports in an Employee Analytics Dashboard.

Target Fields

- Employee ID — String
- Employee Name — String
- Email — String
- Department — String
- Location — String

Non-Functional Requirements

- Data should be processed consistently.
- The import process should reduce manual data entry.
- The solution should be simple enough for administrators to maintain.
- Imported records should be verifiable after transformation.
- Reports and dashboard should provide clear visibility.

Software Requirements

- ServiceNow instance with required administration/import/reporting access.
- Web browser.
- Google Spreadsheet or Microsoft Excel.
- Excel (.xlsx) file for import.

Input and Output

Input: structured employee spreadsheet. Processing: Import Set + Transform Map + field mapping + Coalesce. Output: validated employee records in Employee Test, reports, and dashboard.
